01 / FIND YOUR STARTING POINT

Relative Pitch

Listen, compare and choose. Learn what each quiz asks you to hear.

What you are practising

Some quizzes ask you to match one note. Others ask you to recognise two notes or find the note a song feels settled on.

Why it helps

You become more confident at finding notes, following melodies and hearing how sounds relate to one another.

Your 18-quiz route

Quizzes	What you choose	Guide
Find the Note	The matching keyboard key	Page 2
Find the Pitch	The exact key, including how high or low it is	Page 2
Relative Tone Pitch #1 & #2	Do, Re, Mi, Fa, So, La or Ti	Page 3
Melodic Second, Third, Fourth, Fifth, Sixth & Seventh	Two note names, heard one after the other	Page 4
Harmonic Second, Third, Fourth, Fifth, Sixth & Seventh	Two note names, heard at the same time	Page 4
Find the Key #1 & #2	The note the music feels settled on	Page 5

One simple routine

Listen
Play the question

Compare
Work out what fits

Choose
Select and submit

These pictures explain how to answer.
The green selections are worked examples. Your answer depends on the sound in each question.

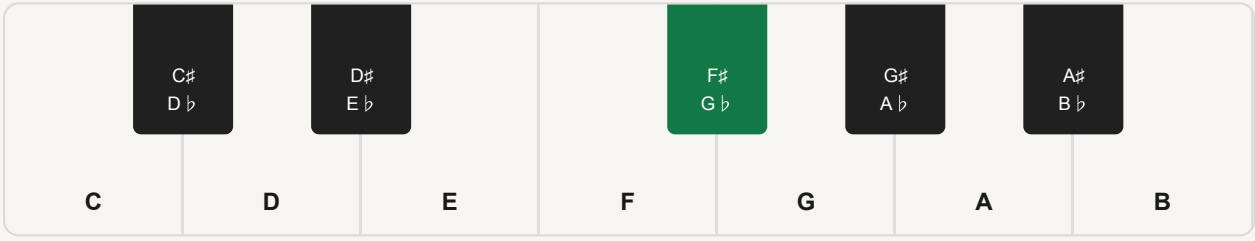

02 / MATCH A KEYBOARD KEY

One note.
Two ways to match it.

Find the Note asks for a name. Find the Pitch asks for the exact high or low version too.

Find the Note

Press Play. Tap the keyboard keys to compare their sounds with the note you heard. Select the matching key, then press Submit Answer.

Example: F♯ / G♭

These are two names for the same black key. Select that key once.

Find the Pitch

A note name can appear in several places on a keyboard. Here, find the place that matches how high or low the sound is.

G3	G4	G5
A lower G	The matching G	A higher G

The number identifies the note's keyboard range, called an **octave**. If you hear G4, choose G4. G3 has the same letter name but sounds lower.

Move between the keyboard ranges to find the sound. On a phone, swipe to browse them. The available keys depend on your chosen instrument.

Listen again when you need to.

Use Replay to start again, or move the audio slider to hear a particular part. Check your selected key before submitting.

03 / LEARN THE SEVEN NAMES

Do, Re, Mi…
Which one did you hear?

Relative Tone Pitch #1 and #2 use the same seven answer names.

Hear one note. Choose one name.

Press Play, listen to the note and choose the name that matches it. You can change your choice before pressing Submit Answer.

Do	Re	Mi	Fa	So	La	Ti

Example answer: Mi

Choose Mi when that is the note name you recognise in the question.

#1 · A smaller range

The sounds stay in one small range, helping you become familiar with the seven names.

Re Mi Fa

The quiz plays one note at a time, not this whole row.

#2 · Higher and lower

The same seven names appear over a wider range of high and low sounds.

Mi → Mi

A lower Mi and a higher Mi still have the same answer name.

Use Listen Mode when it is available

Listen Mode contains reference examples to help you get familiar with the sounds. The question's Play button plays the sound you are answering.

Follow the names on the answer buttons.

In these two quizzes you choose Do, Re, Mi, Fa, So, La or Ti. You are not choosing letter names such as C or D.

04 / HEAR TWO NOTES

One after the other. Or both together.

The melodic and harmonic quizzes cover seconds through sevenths.

Melodic

One after another

Do
First

→

Mi
Next

Choose both names in the order you hear them.

Do - Mi

Harmonic

At the same time

Do
Lower

+

Mi
Higher

Choose the pair with the lower note first.

Do - Mi

What does Second, Third or Fourth mean?

Count the note names from the starting note to the ending note. Include both ends. A third from Do is **Do, Re, Mi**.

Quiz pair	Example names to count	Example answer
Second	Do, Re	Do - Re
Third	Do, Re, Mi	Do - Mi
Fourth	Do, Re, Mi, Fa	Do - Fa
Fifth	Do, Re, Mi, Fa, So	Do - So
Sixth	Do, Re, Mi, Fa, So, La	Do - La
Seventh	Do, Re, Mi, Fa, So, La, Ti	Do - Ti

The starting note changes.

Do - Mi is one third; Re - Fa is another. Choose the actual pair you hear. A mark such as Do′ means the higher version of Do.

05 / FIND WHERE THE MUSIC SETTLES

Find the song's home note.

The home note, also called the tonal centre, is the note the music feels settled on.

Find the Key #1

Play the music. Try humming the note that would make a natural ending.

Tap the keyboard keys to compare sounds. Choose the home note you hear, then submit.

Example: home note C → choose C

Find the Key #2

A highlighted keyboard key gives you a known reference note.

Hear that note and the music. Work out how the reference fits the song, then trace back to its home note.

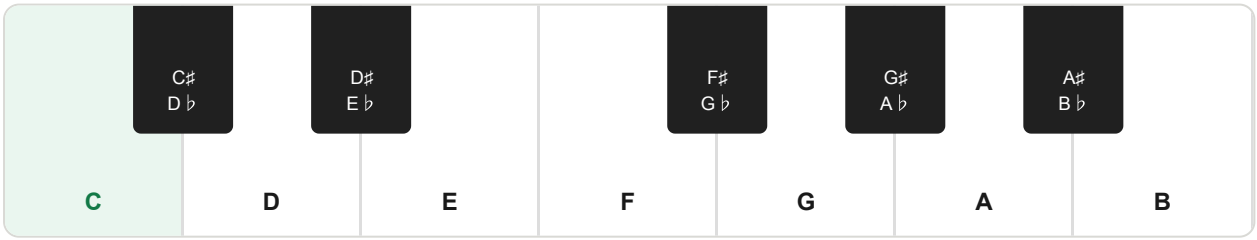

Choose the home note, rather than automatically choosing the reference.

A worked example for #2

The highlighted reference is **A ♭** . You recognise its relationship to the home note as a **flat sixth (♭ 6)**.

A ♭	→	♭ 6	→	C
Known reference		Its role in the song		Home note / answer

A ♭ is the flat sixth above C. That relationship leads you back to C. Select C on the keyboard and submit.

In #2, only the highlighted key plays the reference sound. You can still select any key as your answer. Each question can have a different reference and home note.

The first note is not always the home note.

Listen to how the whole clip feels. A song can begin on another note, so look for the note that feels like a resting point.
