How to use this book

1. Play each row as a block chord, in the stated octave.
2. Follow the highest note of each chord as the melody.
3. Listen to the complete phrase. Check that C still feels like home.
4. Review the first ten before approving any import into the quizzes.

Checked by calculation

All 100 progressions and top-note pitch-class sequences are distinct, including comparison against the 81 existing literal patterns. Every chord retains its defining notes. Inversions and spellings match the MIDI pitches. All pitches lie between C3 and C5; melody steps/leaps are no larger than four semitones, and bass and individual-voice movement no larger than seven.

Two explicit exceptions

CM-051 includes FmMaj7 → FdimMaj7 → Fdim7 → C. CM-052 includes Dm7 ♭5 → Am7 ♭5 → Dm7 ♭5 → C. Each has three chromatic and three diatonic events. The other 98 phrases contain a strict majority of diatonic events.

Four voices per chord: triads double a root or fifth; seventh chords contain all four defining pitch classes. Dm7 ♭5 replaces the Fm6 label. Theory spellings such as C ♭ and E ♭ ♭ are intentional; the melody summary uses familiar sounding names. C4 = MIDI 60.

Review draft. Pitch checks do not prove musical quality. Unusual routes follow the owner’s supplied palette, not universal functional-harmony rules. Listening approval is pending. No quiz records, audio attachments or mobile content were changed. Per-instrument recorded-range checks belong to a later approved import step.

6	**C** · 2nd	G3 · C4 · E4 · G4	55 60 64 67

Confirmed Dm7b5 → Am7b5 → Dm7b5 → C chain, framed by C and F. The reciprocal half-diminished connection uses three chromatic events, so it is marked as an exception to the majority guideline.

Full-chain exception: three chromatic events; C remains the intended home.
